## ABOUT A COMPANY/CLIENT

Everstox is a digital platform uniting an integrated network of 3PLs and carriers. They make first-class logistics accessible to commerce brands. With their Logistics as a Service solution, brands are empowered to create a powerful delivery experience while keeping distribution logistics efficient with a smart tool on their side. Everstox technology unites operational excellence with convenient provider management.

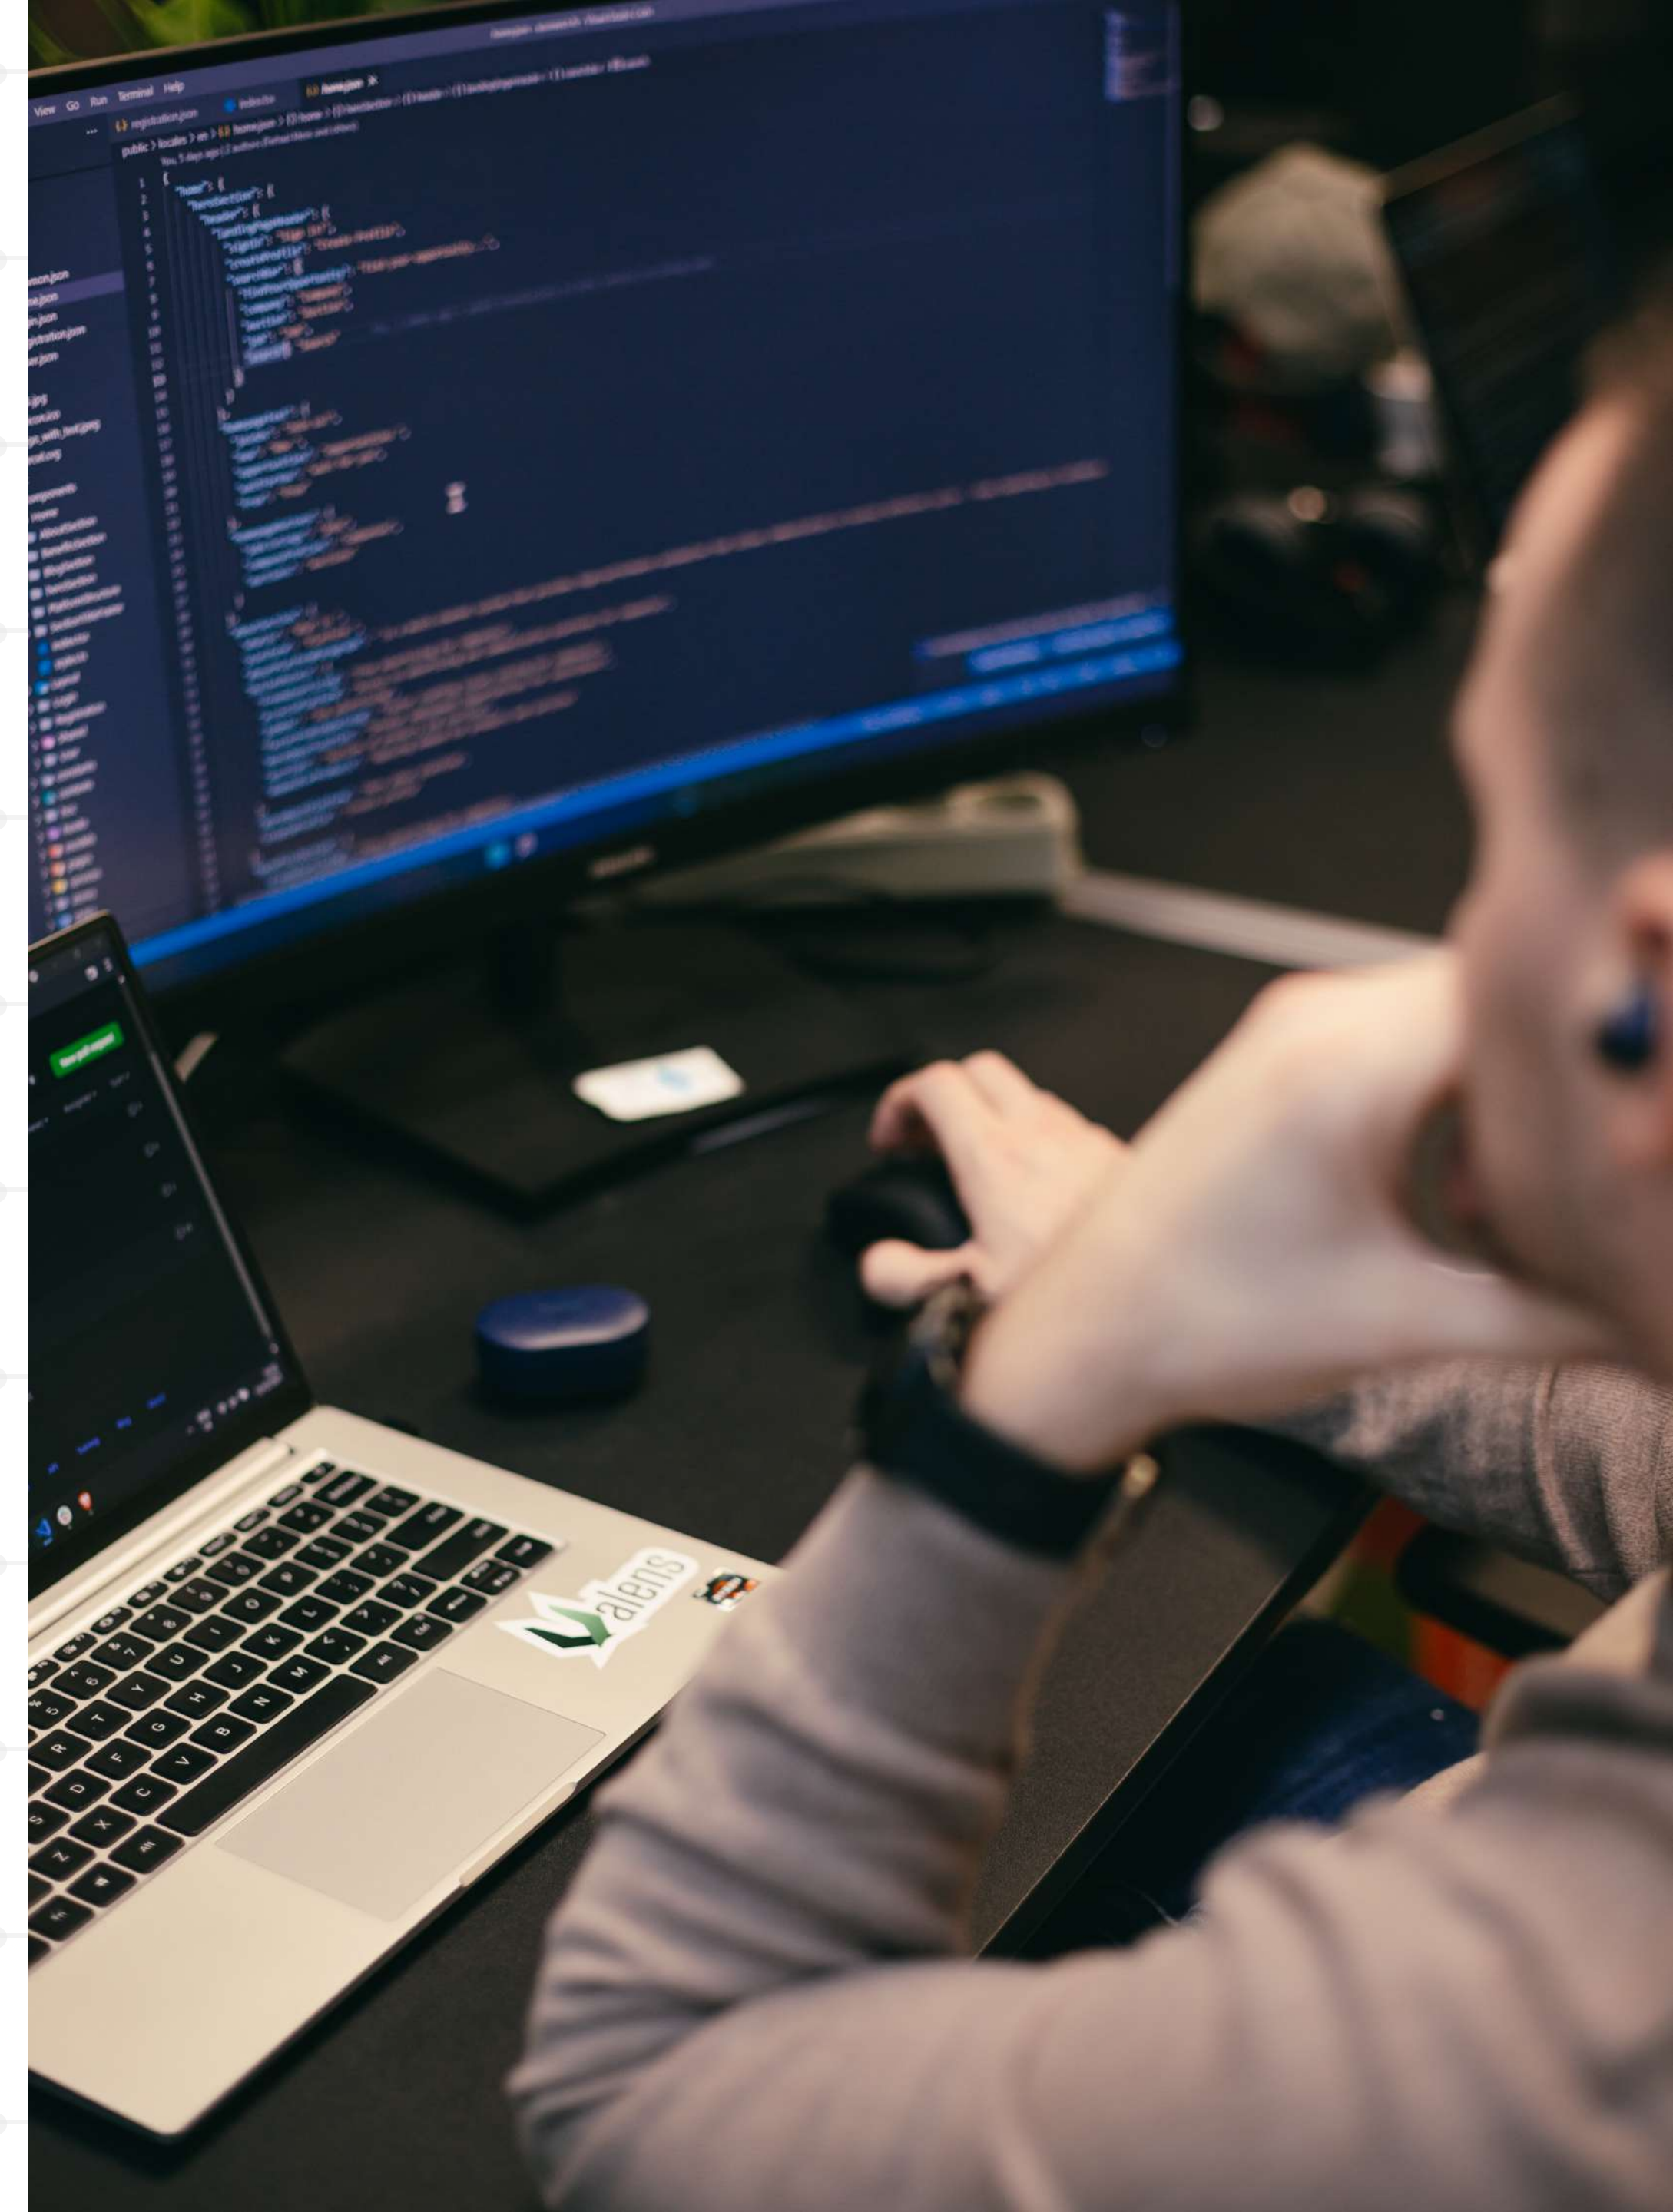

# CHALLENGES AND SCOPE OF WORK FOR VALENS TEAM

Challenges for Valens team: fully understanding the business logic of Everstox and creating a software solution for:

- Setting the new standard of distributing products for market leaders of tomorrow
- Enhancing the logistics network with one technology
- Optimising the flow of goods through Europe
- Optimising warehousing and fulfilment operations and
- Reducing transport emissions along the supply chain

# THE SCOPE OF WORK INCLUDES:

- **FRONTEND DEVELOPMENT**
- **BACKEND DEVELOPMENT**
- **QA**
- **DEVOPS**
- **TECHNICAL SUPPORT**

## Frontend:

- Lead end-to-end web application development, from planning to deployment.
- Demonstrate expertise in ReactJS and related libraries for efficient and modular code.
- Collaborate with UI/UX designers to create visually appealing user interfaces.
- Ensure performance optimization, cross-browser compatibility, and reliable testing for a smooth user experience.

## Backend:

- Lead the design and development of server-side logic, ensuring high performance.
- Design and implement database schemas, queries, and optimizations for seamless data storage and retrieval.
- Create and maintain RESTful APIs to facilitate communication between the front-end and backend systems.

**Everstox**

Case study

## QA:

- Developing a new automation solution to validate that new and existing features are behaving as expected.

## Technical Support:

- Resolving technical support tickets raised by their customer support team ("1st Level Support") on internal monitoring systems
- Working hands-on on complex issues that involve their internally developed system as well as 3rd party systems

## DevOps:

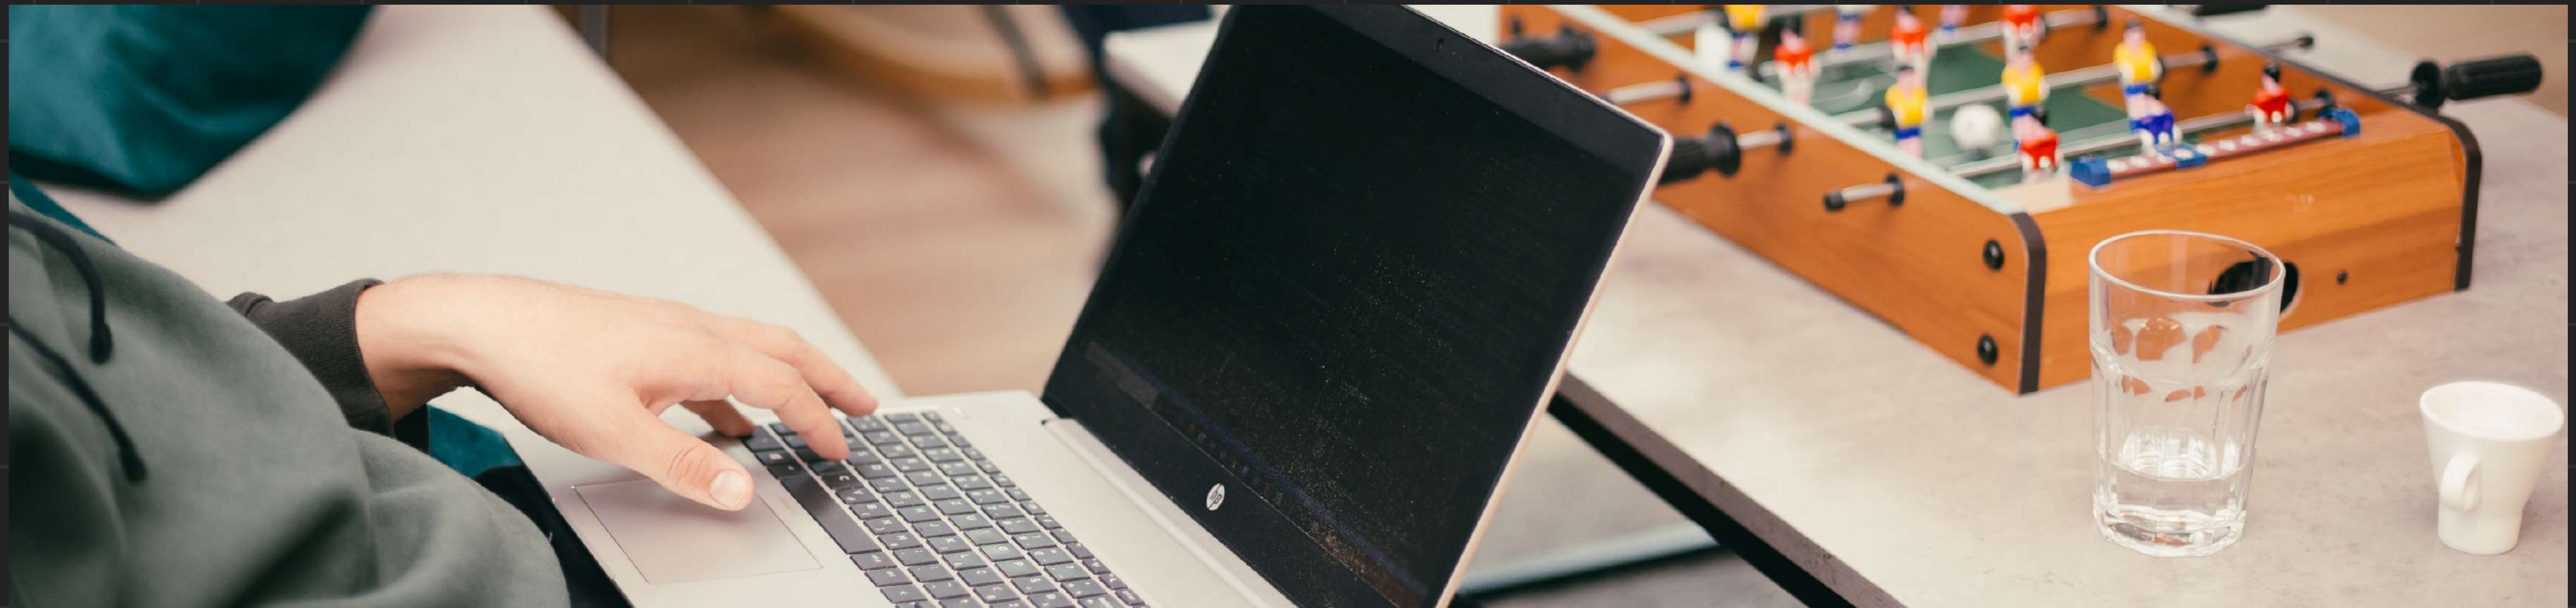

- Main duties include deployment and maintenance of project infrastructure, setting up the Continuous Integration & Deployment (CI/CD) pipelines, migrating to the cloud, introducing best automation practices and tools, monitoring all technical operations, and providing on-call IT support.

Case study

# OUR APPROACH, SOLUTION AND OUTCOME

- We've been their software development partner from the very beginning, helping Everstox build, test and deploy a software solution ready for the European market and ensuring new investments moving forward (successfully completed Series A, currently in the process for Series B investment)

- Selling products goes hand-in-hand with delivering them. But eCommerce & B2B logistics is more than reliable product storage, order pick & pack services and shipping. It was about exciting their customers in all target markets, while keeping their operations efficient and scalable.
- All the efforts we made while providing a high quality software development service, guiding them through the development cycles and having a consulting approach instead of pure outsourcing brought us to the position of becoming their reliable development partner and having Everstox as our client over the past few years.

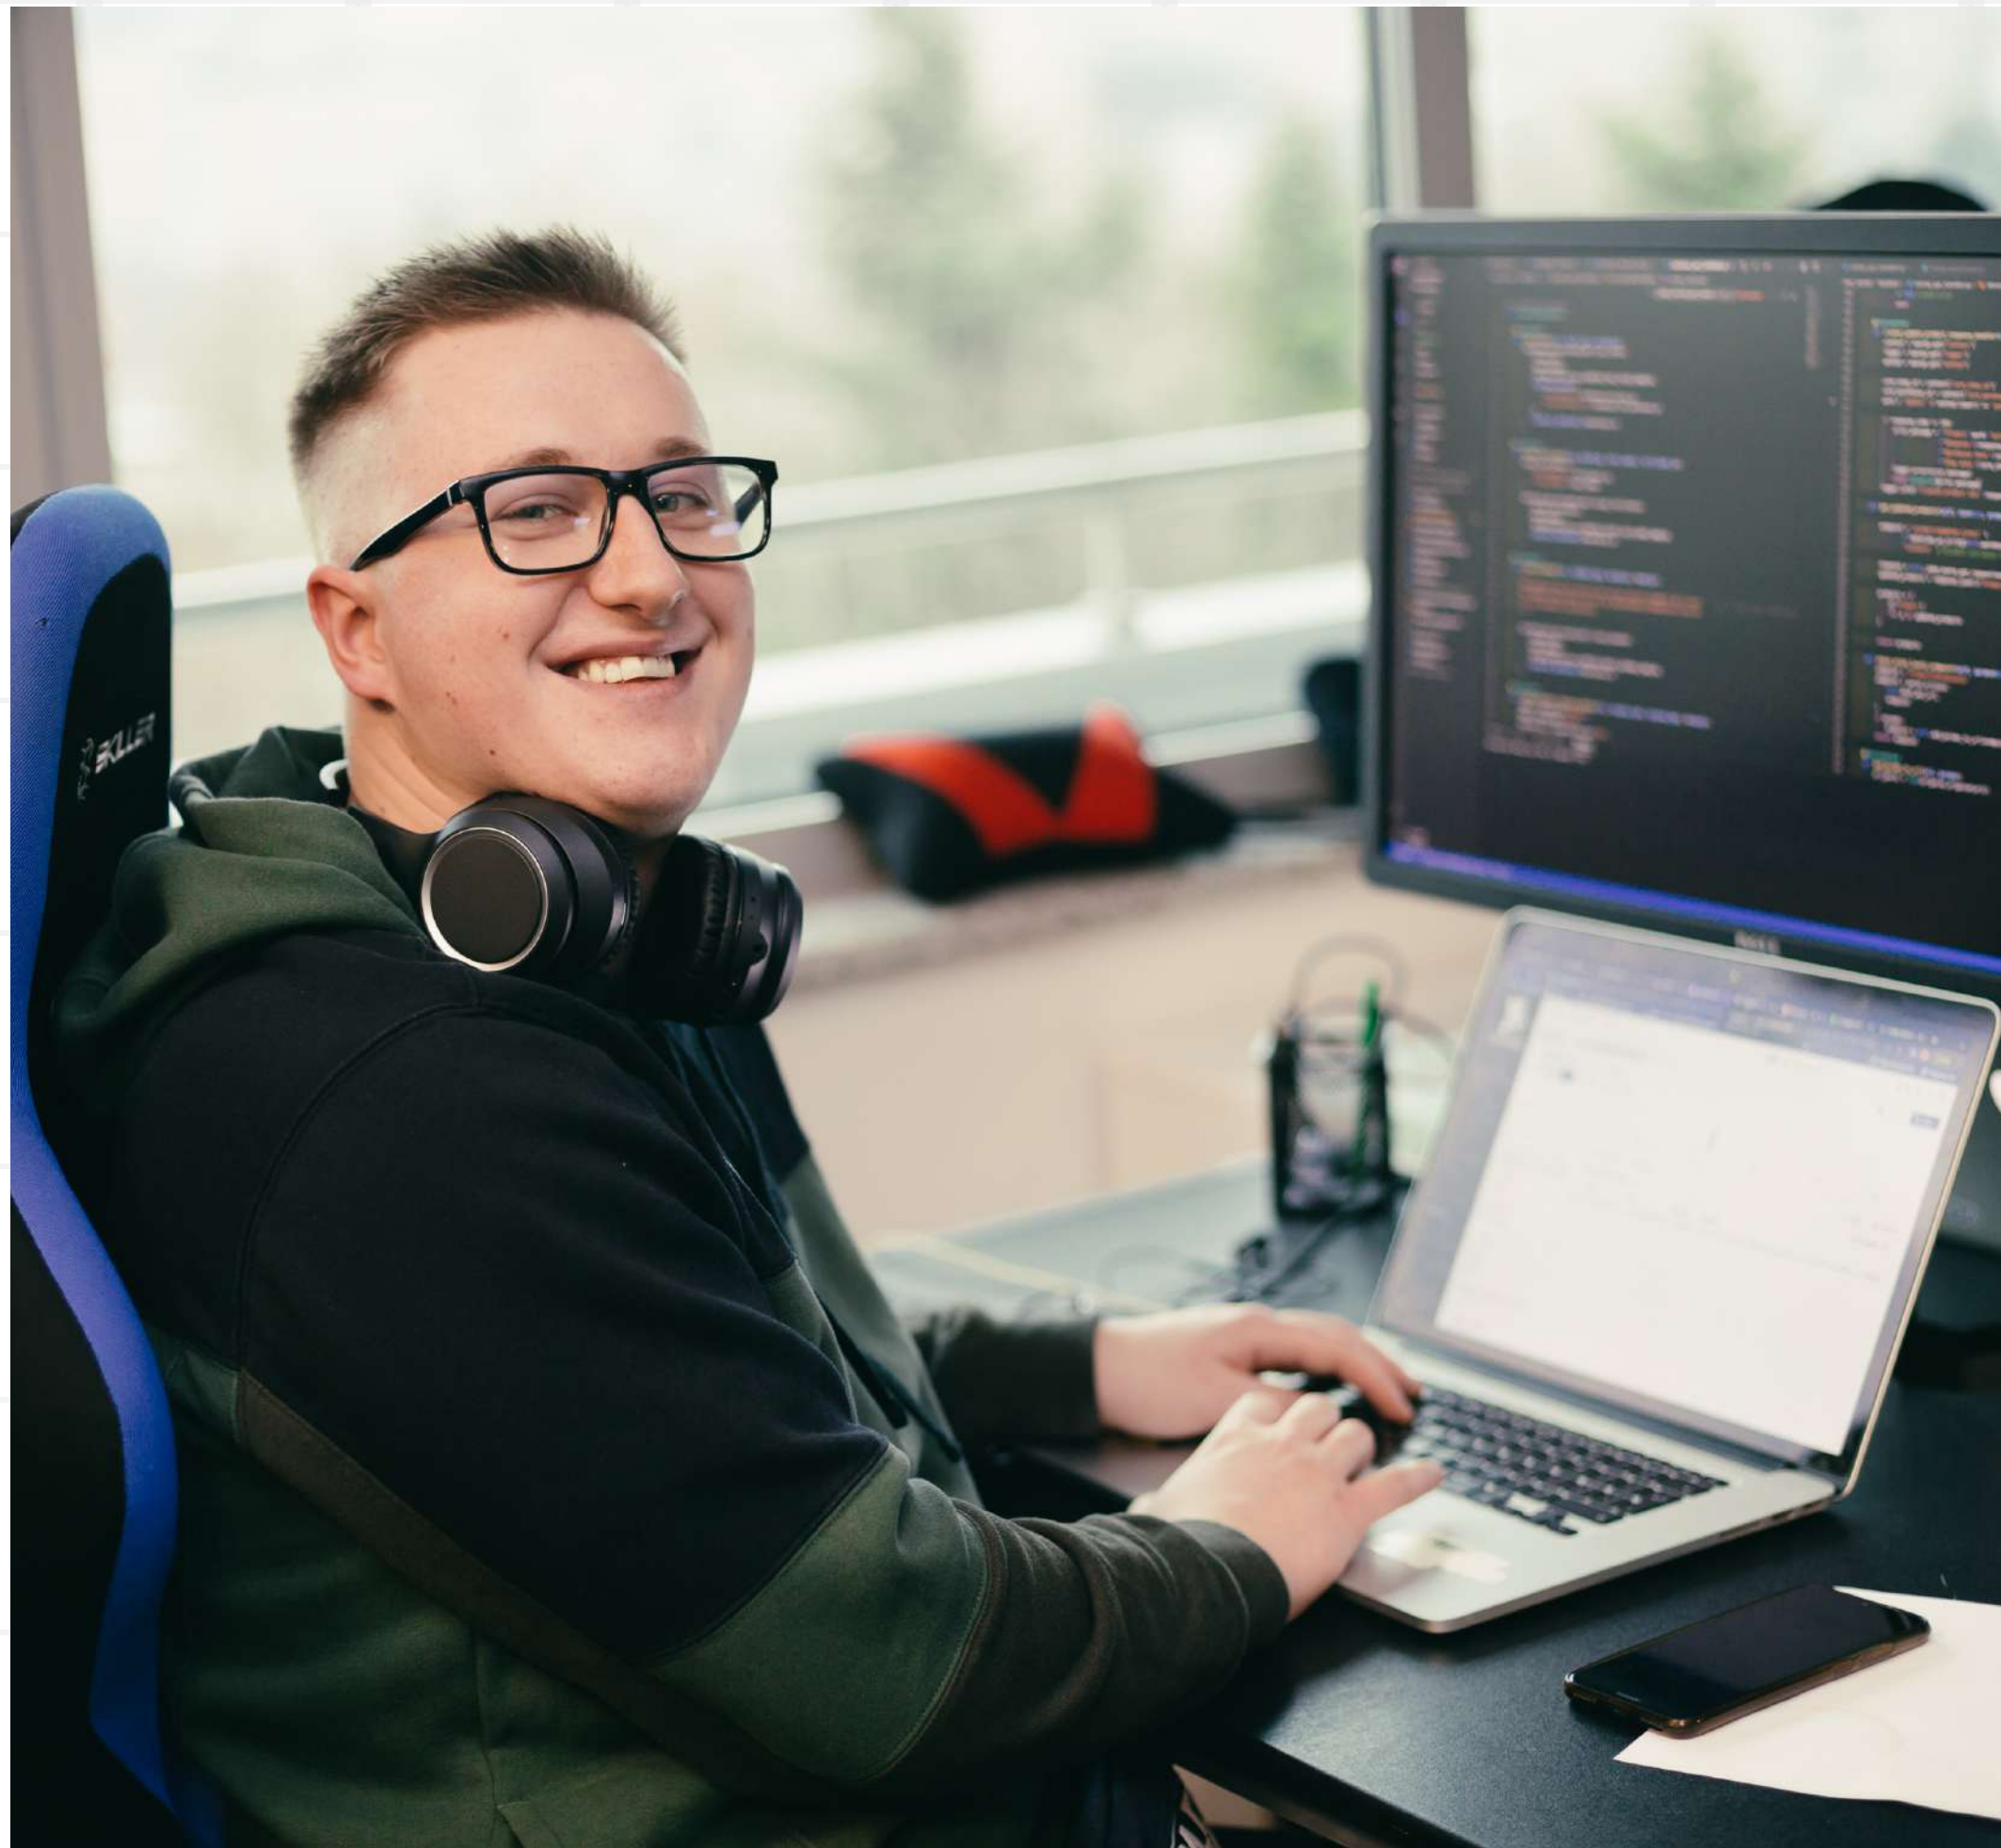

## BUSINESS IMPACT OF A BUILT SOFTWARE SOLUTION

Valens helped Everstox build a revolutionizing logistics and warehousing platform which helped them to be ranked on a 1st place as innovative software startup in Munich by EU Startup News in April 2023; Winner 2022: eCommerce Germany Awards - Best logistics solution 2022 ; Winner 2022: German innovations awards - Excellence in B2B: Logistics & Infrastructure

**Everstox**  
Case study

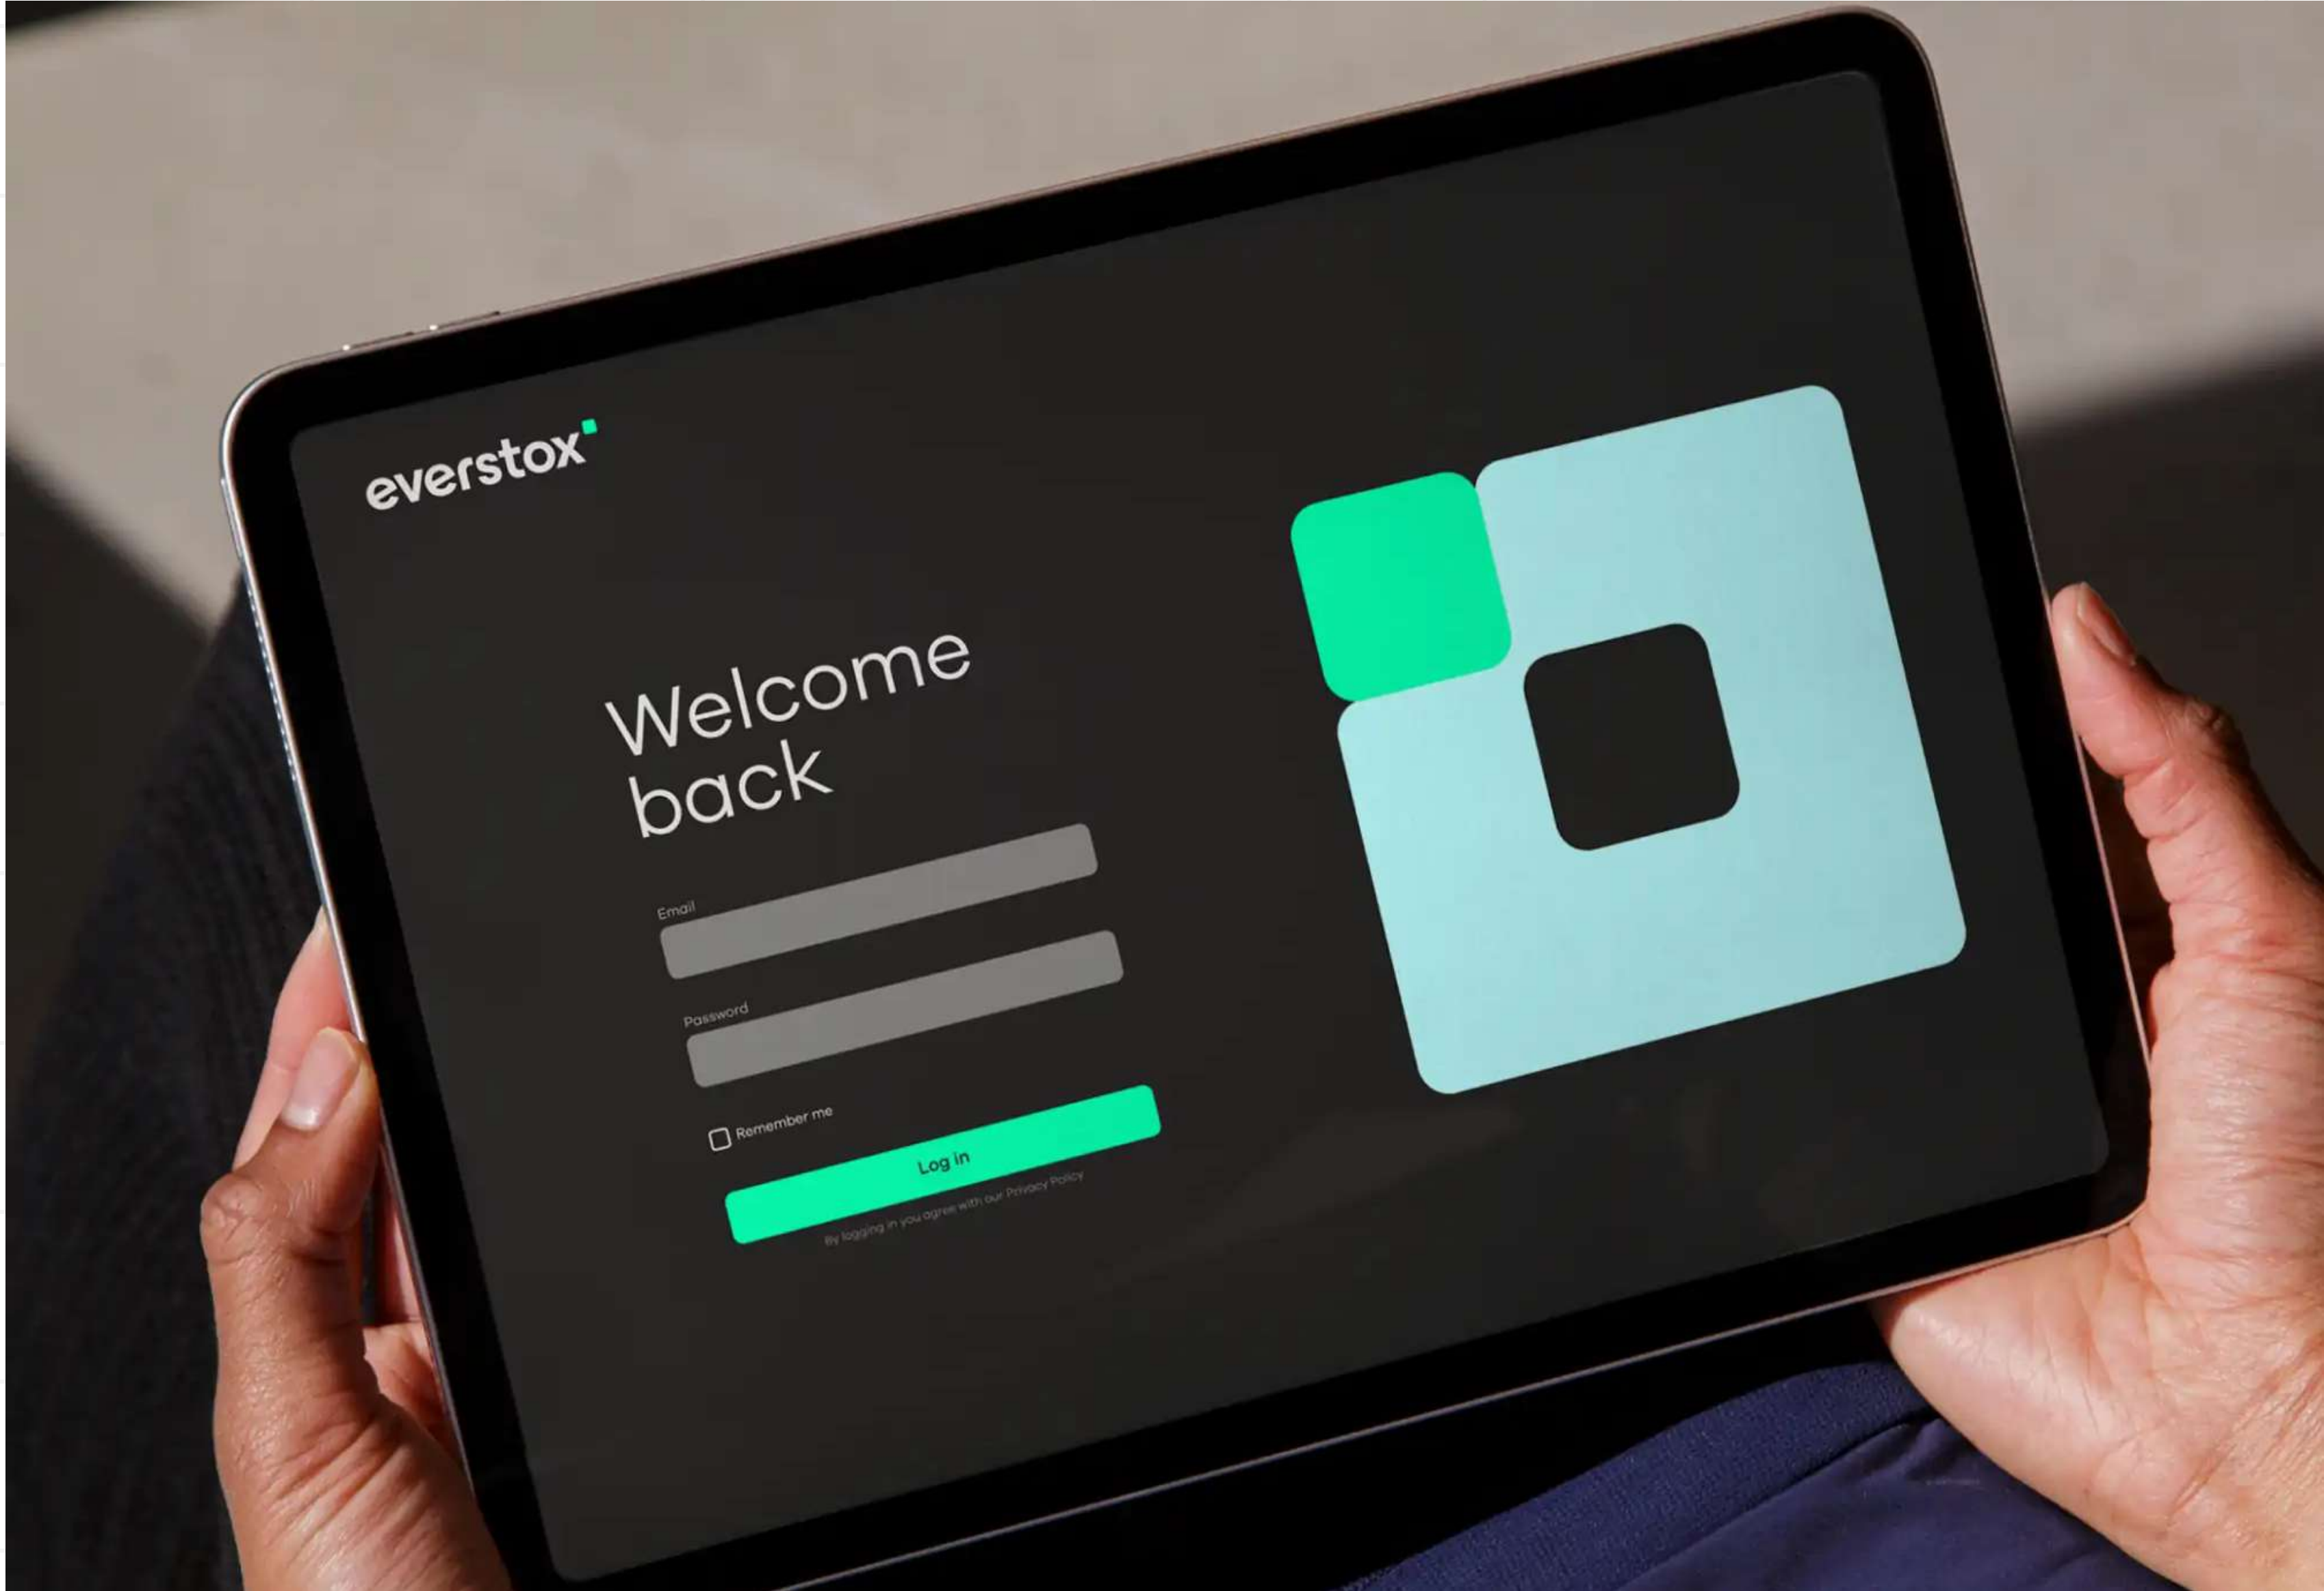

The platform integrates with various carriers, marketplaces, and ERP systems, allowing companies to manage their entire logistics operations from a single dashboard. Founded in September 2019, Everstox has raised €25M to date and is on a mission to become Europe's most powerful logistics solution. Everstox has already connected over 69 fulfillment locations worldwide to the everstox Logistics-as-a-Service platform using proprietary cloud technology.

# TEAM STRUCTURE & TECH STACK

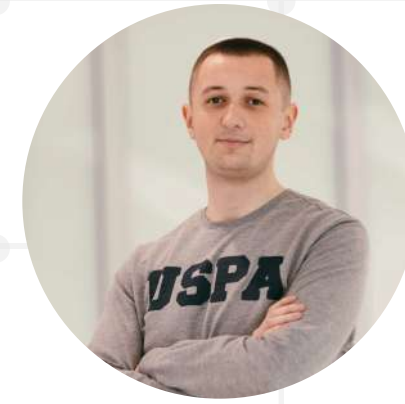

Total number of people involved in the project: 7

- Frontend Developers 2
- Backend Developers 2
- QA 1
- DevOps 1
- Technical Support 1

- Python
- Flask
- React
- Postgres
- Circleci
- AWS
- Docker
- Celery

# TEAM AND CLIENT TESTIMONIAL

Ivo (Senior Frontend Engineer @ Valens): *“I can confidently say that this organization has been a dream workplace that has truly allowed me to flourish in my career. From the moment I joined the team, I was impressed by the client’s commitment to technical excellence, innovation, and a culture that fosters both personal and professional growth.”*

Lejla (Software Engineer @ Valens): *“Working as a software engineer in a challenging yet rewarding environment with Everstox has been a valuable experience, empowering me to push my boundaries and contribute to innovative solutions.”*

Josip (Software Engineer @ Valens): *“Working with this client was an incredibly positive experience, as it pushed me to grow professionally, and together, we crafted a phenomenal product that surpassed all expectations.”*

Client testimonial- Felix Haberland (CTO & Co-Founder)  
*“We have been working very successfully together with Valens for multiple years on different long-term projects. Highly recommended and always to our fullest satisfaction.”*
